Integrated Retail Application Add - on For SAP Business One

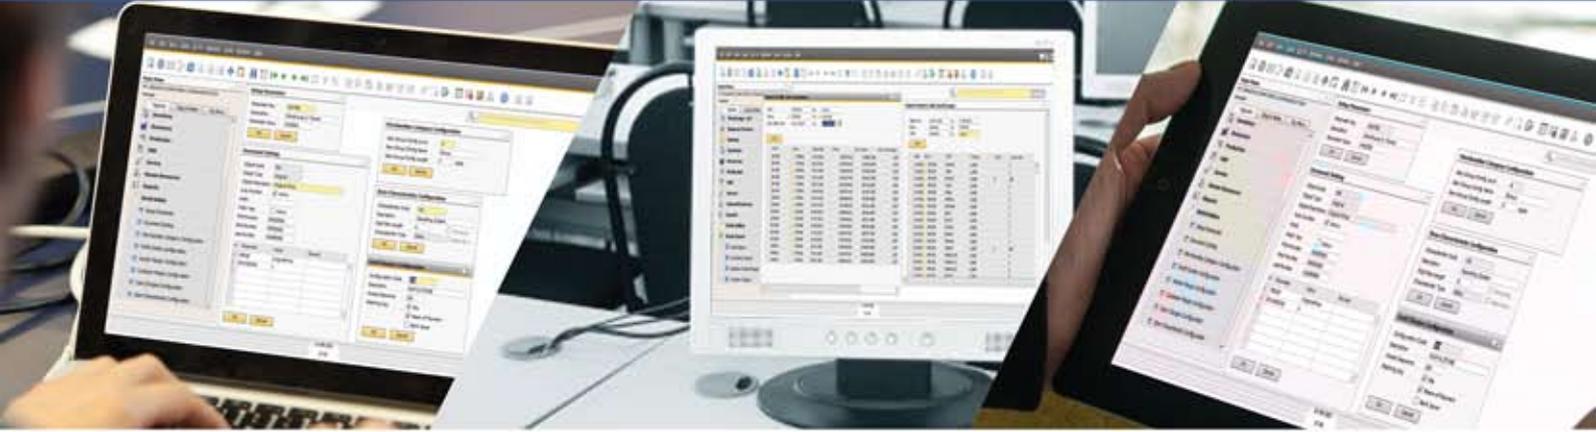

» Powerful » Best Value » Fully Integrated » Affordable

Execution is critical and is particularly difficult to do because of all the details. Managing the detail is therefore important and crucial in order to obtain accurate and timely information for better decision making process.

With numerous SAP Retail implementations and frequent interactions with prominent retail players in Indonesia, PT Sterling Tulus Cemerlang (STEM), in collaboration with SAP, is pleased to present retail solution for small and medium companies.

The solution called iReap which stands for Integrated Retail Application, sits on SAP Business One Systems and offers specific functionalities such as: Retail Master Data Management, Merchandising Assortment, Sales & Promotion, Retail Partner Business Scheme and Front end Connector.

RETAIL MASTER DATA MANAGEMENT

iReap complements SAP Business One with retail specific master data management that include among other things: Generic and Variant Articles, Merchandise Classification / category, Customer and Vendor Consignment Master Data as well as pricing and promotion. The sub module has been carefully designed and developed with emphasis on ease of use for the retail industry (e.g. handling high volume of fast moving items), data integrity and control as well as support of multi-view reporting (e.g. by location, by product and by organization structure)

MERCHANDISE ASSORTMENT

One of retailer's challenging tasks is to optimize the merchandise assortment to their distributed stores, i.e. which stores sell what products and at what price.

The newly-launched iReap provides merchandise assortment functionalities that enable retailers to set the assortment strategy and monitor the execution all the way to stores (Point of Sales Systems). With this sub module, merchandiser will be able to set their rules specific to store or group of stores and monitor the execution, hence have higher degree of control of the day to day operation.

SALES & PROMOTION

iReap support both retail sales (transaction via Point of Sales Systems) and wholesale sales (e.g. wholesale transactions to corporate). Sales will automatically update inventory and post accounting journal accordingly. As for Retail Sales, the iReap Connector will upload the store-related data from Point of Sales (POS) systems and automatically will update relevant data such as sales, inventory, and Means of Payment (MOP). Other financial data, such as: commissions to bank, vendor consignment settlement etc will be calculated and posted in the SAP Business One Accounting Module.
